

Company portrait

“Ensuring flawless care through high-quality medical products.

That is what drives us. For more than 110 years. And in the future.”

We develop, produce and sell cutting-edge medical technology that makes a significant contribution to people’s health and quality of life. Physicians and users worldwide trust in our 110 years of expertise. As an independent family company we operate in a self-determined manner and are proud of our continuous, healthy growth.

Our Executive Board is formed by Managing Partner Christoph Ulrich and Chief Executive Officer Klaus Kiesel and the Authorized Officers Cornelia Schweizer, Sven Erdmann and Steffen Kölsch.

Dedicated to medical technology

Our company was founded in Ulm, Germany in 1912 by Heinrich C. Ulrich and has remained a family-owned company until today. In fourth generation the company is still focussing on the dedication of medical technology and innovative strength. The award of the F.A.Z.-Institute as one of the “Innovation Leaders of Germany 2020” proves that our consistent focus on developing future-oriented technologies and products is exactly on point.

Health in the best of hands

We are among the first medical technology manufacturers in Germany to be successfully MDR audited.

Flexibility and personal support by competent, responsible staff are top priorities for us. We act fast and reliable, ask the right questions and give knowledgeable answers. Open communication is what we practice daily in our offices and the same is true in our relationship with our partners and customers.

Milestones through product innovations

We contribute to the preservation and recreation of human health through continuous development, manufacturing and worldwide distribution of first class medical devices. We consistently emphasize the quality represented by the designation “Made in Germany”. Intensive investigations and discussions with experts within the industry provide important impulses to meet the permanently changing requirements of the market. We are considered a “high tech” company in the sector. Manufacturing in our state-of-the-art facilities follows the highest technical standards.

The product divisions of ulrich medical:
Spinal systems and contrast media injectors
for CT and MRI

Successful with two product divisions

Our product portfolio focuses on spinal implants and contrast media injectors for CT and MRI.

Our spinal systems unit develops, manufactures and distributes implants primarily made of titanium. These are used for treating injuries and illness from the neck to the lumbar spine.

Known as a technological leader in the field of contrast media injectors, our technologically advanced and patented devices provide reliable support for modern diagnostic imaging. Their user-friendly operation, outstanding quality and proven hygienic safety make them indispensable in everyday practice and were among the reasons for the coveted approval in the USA, the world's largest medical technology market.

Customer proximity counts

When it comes to expert advice and dedicated service, we believe that proximity and personal contact are essential to our business. In our domestic market we therefore rely on direct sales. For the strategically important market USA a subsidiary was founded in 2006. In Europe's second-largest medical technology market, France, we also sell our contrast media injectors and spinal systems through our own sales subsidiary.

Worldwide we operate via exclusive distribution partners, comprehensively serving our customers and prospects.

ulrich medical provides for the future

We offer safe jobs and invest continuously in training and further education. Internationally, we employ more than 500 people and are an attractive employer and reliable partner – now and in the future!
